AMENDMENTS TO THE CLAIMS

1. (Previously Presented) A personal information device (PID) for controlling telephone service

comprising:

a user interface comprising a display and a user input device;

a user profile having a telephone number entered by a user;

a communications function to establish a data communications channel over a wireless

network to a telephony control server, the telephony control server containing the user's

telephony account; and

an account update function to send a message over the data communication channel to the

telephony control server, the message containing the user profile telephone number and a request

to set the user's telephony account telephone number to the user profile telephone number.

2. (Original) The PID of Claim 1 further comprising: a contacts application operable to display

a plurality of contact entries, each entry comprising a contact telephone number, the contacts

application operable to send the contact telephone number over the data communications channel

to the telephony control server with a message to call the contact telephone number.

3. (Original) A telephony control server comprising:

a network interface operable to provide data connectivity with a user accessible via a

wireless network;

an accounts program to access a plurality of user accounts, the accounts program operable

to receive a message to set a user telephone number, each user account containing a telephone

2

number entry, the accounts program being operable to set the telephone number entry in response

to the message;

a connection signaling function to receive a call message from the user and to establish a

telephone connection between the user telephone number and a callee telephone number

contained in the call message; and

the connection signaling function operable to initiate a telephone call having at least a

portion of the telephone call connected via the data network.

4. (Previously Presented) The telephony control server of Claim 3 further comprising:

a gateway locator to locate a user gateway closest to the user telephone and to locate a

callee gateway closest to the callee telephone; wherein the connection signaling function initiates

the portion of the call connected via the data network between the user gateway and the callee

gateway.

5. (Original) A method for modifying a user telephone account having a telephone number

entry using a wireless personal information device (PID) connected over a data network, the

method comprising the steps of:

updating a user profile in the wireless PID to a user telephone number; and

3

sending a request to set the user telephone account to the user telephone number over a

data communications channel to a telephony control server wherein the telephony control server

updates the user telephone number entry to the user telephone number.

Claims 6-7. (Canceled)
